

Vision Lite™ 2000

Illuminated 10x Magnifier

The **Vision Lite™ 2000** is the world's first dimmable fluorescent illuminated magnifier. New state-of-the-art, microchip-controlled ballast technology allows the Vision Lite 2000 to be dimmable from 100% down to 25%, so that highly reflective surfaces can easily be seen by dimming the unit's exclusive "Full Spectrum Natural Daylight" bulb.

The **Vision Lite™ 2000** boasts one of the largest (46.5sq. inch - 7.5"x6.2") and clearest 3 diopter (1.75x-1.85x) **OPTICAL** quality lenses available for any magnifier product. This magnifier is supplied with a 10 diopter swing-in lens and is constructed to be ESD safe.

An exclusive slide switch allows the operator to change illumination intensity with the stroke of a finger. This bulb's unique design provides three-sided illumination, eliminating annoying shadows that are associated with magnifiers that have only two-sided, or left and right-sided bulbs. It also eliminates all fluorescent flickering, reducing eye fatigue.

10 year Warranty
