

Successful expansion of SCH Technologies

Sep 26, 2007

SCH Technologies is witnessing record growth as its annual turnover has increased by 7 fold during the past 3 years. Linked to this success, the company has also expanded its offices across 2 sites and recently appointed new UK and European Sales Managers.

Reputed by the electronics industry as providing a first class service as a subcontract conformal coating provider, this South Yorkshire based company is growing from strength to strength.

SCH Technologies consists of three areas: Humiseal conformal coatings, coating application systems and a state-of-the-art subcontract service. These three options offer companies an excellent choice when deciding how to coat their PCBs. They can either set up a tailor-made in-house solution using Humiseal conformal coatings and SCH coating equipment or choose to sub-contract the coating to a service which boasts the shortest lead-times with a fast-track service down to 4 hours, without compromising the quality of the coating finish. With this all-round ability, SCH is able to provide a cost-effective solution to meet electronics manufacturer's needs.

"I am delighted to have joined SCH Technologies at this exciting time. We are not only expanding our services but also our extensive conformal coating equipment division and our new coating materials," comments Mark Rogers, UK Sales Manager at SCH Technologies. "Our new product range of UV Cure Equipment will be exhibited at Productronica and we have recently introduced the Humiseal range of conformal coatings."

SCH Technologies has recently exhibited at the 'Defence Standards Exhibition- DSEi' in London and are exhibiting at 'Productronica' in Munich in October this year. The stand can be found in hall A3 and is stand number 546.
