

Conformal coating training

How well is your team trained in your conformal coating process?

If you use conformal coating in your production we can help to develop or optimise your process to ensure you achieve the best performance.

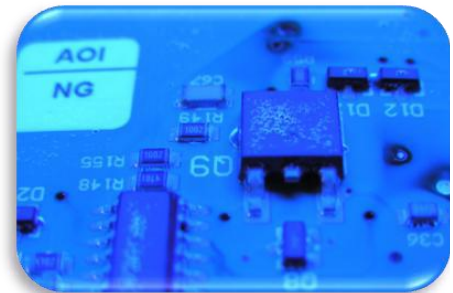

SCH uniquely can offer expert training in all areas of coating including application techniques, material selection, process-optimisation and troubleshooting.

We can provide standard or tailored training packages that cover any of the critical issues relating to conformal coating processing that you may need.

What we can offer

- Basic knowledge and understanding
- Conformal coating and equipment selection
- New product introduction
- Masking and de-masking
- Inspection criteria
- Process control and development
- Troubleshooting and problems solving
- Conformal coating removal and repair

Training can be both theoretical and practical and can be delivered either at a customer's facilities or own of our own global coating services facilities.
