

Conformal coating benchmarking

Would you like to know how good your conformal coating process really is?

A benchmark review of your conformal coating processes and other related applications including assembly and cleaning from an outside expert will almost certainly lead to an improvement and offer savings in time, efficiency and money.

Engineers today are so busy it is difficult to keep up with the specialist niche knowledge required relating to conformal coating, cleanliness and reliability.

To solve this issue it is generally easier to use an outside expert that can tell you how well your processes compare to the cutting edge companies and techniques in operation today.

The benchmark assessment would involve the complete analysis of a customer's current production process including but not exclusive to conformal coating from a reliability point of view.

This assessment would then be compared against industry standards to aid improvement within the facility and avoid long term reliability problems.

SCH Technologies is a Consultant Member of the unique Nexus3C Conformal Coating Consultancy.

This allows customers of SCH to receive unparalleled service, knowledge and analysis to address the many issues and problems which occur regularly in the world of electronics manufacturing related to coating, cleanliness and long term reliability. The consultation services SCH can offer help with troubleshooting, new product introduction (NPI), benchmarking and support contracts.

Contact us directly so that we can help you now.
